KEY FACTS TUBERCULOSIS SWITZERLAND 2023

Even though there are few cases of tuberculosis in Switzerland per year compared to the rest of the world, correct detection, treatment and prevention are important public health measures.

410

TB cases have been reported to the FOPH.

229

 contact investigations were carried out.

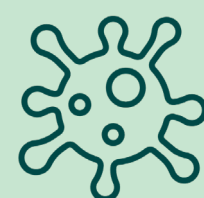

61 %

of infected contacts started ITB therapy.

94 %

of people tested were tested with IGRA versus 6% with TT.

361

people out of 2 061 tested as part of contact investigations are considered as infected.

77 %

of infected contacts who started a therapy, successfully completed their ITB treatment.

60 %

of the contact investigations involved 1 to 10 people.

71 %

of tuberculosis cases are pulmonary, 24 % are exclusively extrapulmonary.

DIRECTLY
OBERVED
THERAPY

156

DOTs in total were carried out, representing 38% of the treatments.
